School Law and the Public Schools by Nathan L. Essex gives educators and policy makers at all levels practical, easy-to-read, relevant information on the historical and contemporary legal issues affecting the organization and administration of schools in the United States. Virtually every topic of concern to today's educators is covered in a practical, easy-to-read organization and

style that's accessible even to those with little or no knowledge of the legal issues affecting public schools. Revised chapters in this new Sixth Edition include recent rulings on religion in public schools, social media, Facebook and Twitter challenges, virtual charter schools, administrators' authority at bus stops, legal aspects of teachers and administrators' evaluation, teacher performance and misconduct, 504 Rehabilitation plans, the McKinney-Vento Homeless Act, violence and tragedy in U.S. schools, procedures for evaluating and responding to threats, natural disasters and school safety, proposed changes to No Child Left Behind by the White House, use of chaperones for field trips, and new application exercises at the end of each chapter.

This new book on Black public schooling in St. Louis is the first to fully explore deep racialized antagonisms in St. Louis, Missouri. It accomplishes this by addressing the white supremacist context and anti-Black policies that resulted. In addition, this work attends directly to community agitation and protest against racist school policies. The book begins with post-Civil War schooling of Black children to the important Liddell case that declared unconstitutional the St. Louis Public Schools. The judicial wrangling in the Liddell case, its aftermath, and community reaction against it awaits a next book by the authors of *Anti-blackness and public schools*.

How big data and machine learning encode discrimination and create agitated clusters of comforting rage. In *Discriminating Data*, Wendy Hui Kyong Chun reveals how polarization is a goal—not an error—within big data and machine learning. These methods, she argues, encode segregation, eugenics, and

---

identity politics through their default assumptions and conditions. Correlation, which grounds big data's predictive potential, stems from twentieth-century eugenic attempts to "breed" a better future. Recommender systems foster angry clusters of sameness through homophily. Users are "trained" to become authentically predictable via a politics and technology of recognition. Machine learning and data analytics thus seek to disrupt the future by making disruption impossible. Chun, who has a background in systems design engineering as well as media studies and cultural theory, explains that although machine learning algorithms may not officially include race as a category, they embed whiteness as a default. Facial recognition technology, for example, relies on the faces of Hollywood celebrities and university undergraduates—groups not famous for their diversity. Homophily emerged as a concept to describe white U.S. resident attitudes to living in biracial yet segregated public housing. Predictive policing technology deploys models trained on studies of predominantly underserved neighborhoods. Trained on selected and often discriminatory or dirty data, these algorithms are only validated if they mirror this data. How can we release ourselves from the vice-like grip of discriminatory data? Chun calls for alternative algorithms, defaults, and interdisciplinary coalitions in order to desegregate networks and foster a more democratic big data.

Gets them engaged. Keeps them engaged. Bob Blitzer's use of realistic applications instantly piques students' curiosity about the presence of mathematical concepts in the world around them. These applications are apparent throughout the entire program—from his relatable examples, friendly writing style, and thought-provoking features in the textbook, to the enhanced digital resources in the MyMathLab course. Blitzer pulls from topics that are relevant to college students, often from pop culture and everyday life, to ensure that students will actually use their learning resources to achieve success. With an expansion of the series to now include a Developmental Math "all-in-one" text (with content spanning prealgebra through intermediate algebra), and with an enhanced media program accompanying this revision, developmental students at all levels will see how math applies to their daily lives and culture. Also available with MyMathLab MyMathLab® is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them absorb course material and understand difficult concepts.
