Most previous research on human cognition has focused on problem-solving, and has confined its investigations to the laboratory. As a result, it has been difficult to account for complex mental processes and their place in culture and history. In this startling - indeed, disco in forting - study, Jean Lave moves the analysis of one particular form of cognitive activity, - arithmetic problem-solving - out of the laboratory into the domain of everyday life. In so doing, she shows how mathematics in the 'real world', like all thinking, is shaped by the dynamic encounter between the culturally endowed mind and its total context, a subtle interaction that shapes 1) Both tile human subject and the world within which it acts. The study is focused on mundane

daily, activities, such as grocery shopping for 'best buys' in the supermarket, dieting, and so on. Innovative in its method, fascinating in its findings, the research is above all significant in its theoretical contributions. Have offers a cogent critique of conventional cognitive theory, turning for an alternative to recent social theory, and weaving a compelling synthesis from elements of culture theory, theories of practice, and Marxist discourse. The result is a new way of understanding human thought processes, a vision of cognition as the dialectic between persons-acting, and the settings in which their activity is constituted. The book will appeal to anthropologists, for its novel theory of the relation of cognition to culture and context; to cognitive scientists and educational theorists; and to the 'plain folks' who form its subject, and who will recognize themselves in it, a rare accomplishment in the modern social sciences.

Her studies of reasoning and thinking in their cultural and activity contexts added new concepts, methods, and findings to what many are now viewing as a distinctive branch of psychological studies. She was among the first to combine

ethnographic studies with experimental studies in order to determine relationships among indigenous literacy and logical activities and their cognitive outcomes. Mind and Social Practice brings together published and previously unpublished work from Sylvia Scribner's productive and wide-ranging career. The book is arranged chronologically and includes five section introductions by the editors, placing Scribner's work in the context of her life, her commitments, and the political and intellectual events of the times. poorest state in the nation, poverty is a pressing social problem. Even so, Robert Lee Maril ' s *Waltzing with the Ghost of Tom Joad* is the first comprehensive analysis of poverty in the state. Skillfully combining ethnography with statistical analysis, Maril portrays the lives of poverty-stricken Oklahomans, many of them children, minorities, and the elderly. Exploring myths about the poor and discussing the facts behind these myths, Maril discusses the real causes of poverty in the state, especially low-wage labor. He concludes by presenting a public-policy agenda that would benefit the poor directly and, in so doing, improve the lives of all Oklahomans. From the Foreword by Robert McCormick: Why did my grandparents and many Oklahomans of their generation escape from poverty while many others did not? The reasons are not clear. Nor do we have easy explanations for those present-day

Oklahomans fighting the same struggle. Robert Lee Maril ' s compelling account shows the plight of hundreds of thousands who remain poor even though conditions in the state have vastly improved. Blaming the victim is not an option for intelligent and caring Oklahomans. The question before us today is, what will we do as citizens to reduce the level of poverty in our state? From my vantage point as someone who has fought for increased opportunities for Oklahomans. I have seen a common thread that runs through story after story of individuals who make the move from poverty to prosperity: that thread is access to and support for education. Inherent inequalities in economic and family backgrounds often dissipate before doors that education routinely opens. One wonders in reading Dr. Maril ' s accounts of Oklahomans in poverty how different their stories might have been had someone

cared enough to see to it that their underlying condition of poverty did not interfere with their opportunity to get an education.
