If a machine could predict how you would die, would you want to know? This is the tantalizing premise of *This Is How You Die*, the brilliant follow-up anthology to the self-published bestseller, *Machine of Death*. THIS IS HOW YOU DIE Stories of the

Inscrutable, Infallible, Inescapable *Machine of Death* The machines started popping up around the world. The offer was tempting: with a simple blood test, anyone could know how they would die. But the machines didn't give dates or specific circumstances—just a single word or phrase.

DROWNED, CANCER, OLD AGE, CHOKED ON A HANDFUL OF POPCORN. And though the predictions were always accurate, they were also often frustratingly vague. OLD AGE, it turned out, could mean either dying of natural causes, or being shot by an elderly, bedridden man in a botched home

invasion. The machines held onto that old-world sense of irony in death: you can know how it's going to happen, but you'll still be surprised when it does. This addictive anthology—sinister, witty, existential, and fascinating—collects the best of the thousands of story submissions the editors received in the wake of the success of the first volume, and exceeds the first in every way.

This volume brings together, from a wide range of experience, such information as may be useful in recognizing, avoiding, controlling, designing for, and correcting movement. Current geologic concepts and engineering principles and techniques are introduced, and both the analysis and control of soil and rock-slopes are addressed. New methods of stability analysis and the use of

computer techniques in implementing these methods are included. Rock slope engineering and the selecting of shear-strength parameters for slope-stability analyses are covered in separate chapters.

This book offers a comprehensive overview of the surgical techniques available in reconstruction of the paralyzed face. It is divided into six parts. The first part introduces the topic of facial palsy, and the following parts

provide detailed information on facial nerve reconstruction techniques, management of eye closure and smile reanimation. The book highlights symmetrization techniques and synkinesis and presents innovations and new frontiers in facial palsy. Written by an international group of experts who are committed to maintaining high standards and service in treating this condition and improving outcomes, it is a valuable source of information for clinicians and

practitioners in plastic and reconstructive surgery, neurosurgeons and o
ral-and-maxillofacial surgeons, but also useful for researchers in this field.

Hydrology: Advances in Theory and Practice, brings together contributions to both the theory and practice of hydrology, including chapters on (amongst other topics) flood estimation methods and hydrological modelling. The book also looks forward with a global hydrology research

agenda fit for the 2030s, and explores how to make advances in hydrological modelling - based on almost 50 years of modelling experience. In Focus - a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.

Badger Lippincott Williams & Wilkins
C. M. McKenna's compelling voice has earned a devoted audience and multiple awards

for her erotic fiction. Her page-turning literary debut, *Badger*, disturbs and titillates with the story of a recovering pill addict whose compulsive fascination with a Boston antihero spirals out of control. Nearly twelve months sober, Adrian Birch feels like a nobody. But when her wrist is broken in a hit-and-run accident, she's avenged by the *Badger*, a secretive street vigilante. Instantly obsessed, Adrian takes to staging suicide and constructing chance

meetings to get his attention. Their resulting affair is harsh and needy, wrought with McKenna's signature dark eroticism—until the connection gets out of hand and ignites the violent passions of the city. Hailed for her "evocative," "intense," "realistic," and "engrossing" stories by reviewers at *Publisher's Weekly*, *USA Today*, and *Romantic Times*, McKenna now establishes herself as a rising star in neo-noir. *Badger* challenges the reader to imagine

how an impulsive young man is killed, offering only the perspective of the fascinating and unreliable Adrian Birch.

Leval then guides the reader through an incredible variety of urban examples of self-organisation, from factories and workshops to medicine, social services, Barcelona's tramway system, and beyond. He concludes with a brief but perceptive consideration of the broader political context in which workers carried out such a far-reaching revolution in social organisation—and a rumination on who and what was responsible for its defeat. This classic translation of the original by Vernon Richards is presented in this edition for the first time with an index. A new introduction by Pedro García-Guirao and a preface by Stuart Christie offer a précis of Leval's life and methods, placing his landmark study in the context of more recent writing on the Spanish collectives—eloquently positing that Leval's account of collectivism and his assessments of their achievements and failings still have a great deal to teach us today.

In Hematologic Malignancies: Methods and Techniques, a panel of acknowledged experts review many of the key molecular methods used for the diagnosis and subsequent management of hematologic malignancies. These clinically relevant techniques range from routine test procedures to highly sophisticated methods currently offered only by specialized reference laboratories, and fall into five major groups: cytogenetics, polymerase chain reaction, flow cytometry, cytochemistry and immunochemistry, and apoptosis and cytokine receptors. Serving both clinical and

experimental needs, Hematologic Malignancies: Methods and Techniques provides an array of powerful tools that will guide clinicians- especially hematologists, oncologists, and pathologists- to better diagnose and manage their patients with hematologic malignancies, and enable researchers to assess the anticancer effect of agents that impact cancer cells at the molecular level.

In Sins against Nature Zeb Tortorici explores the prosecution of sex acts in colonial New Spain (present-day Mexico, Guatemala, the US Southwest, and the Philippines) to examine the multiple ways bodies and desires come to be

textually recorded and archived. Drawing on the records from over three hundred criminal and Inquisition cases between 1530 and 1821, Tortorici shows how the secular and ecclesiastical courts deployed the term *contra natura*—against nature—to try those accused of sodomy, bestiality, masturbation, erotic religious visions, priestly solicitation of sex during confession, and other forms of "unnatural" sex. Archival traces of the visceral reactions of witnesses, the accused, colonial authorities, notaries, translators, and others in these records demonstrate the primacy of affect and its importance to the Spanish documentation and

regulation of these sins against nature. In foregrounding the logic that dictated which crimes were recorded and how they are mediated through the colonial archive, Tortorici recasts Iberian Atlantic history through the prism of the unnatural while showing how archives destabilize the bodies, desires, and social categories on which the history of sexuality is based.

Miss Beecher's Domestic Receipt-book
Springer Nature
2011 Reprint of 1961 Edition. Many social scientists have attempted to lump the unique Inca society into modern political and economic categories. Louis Baudin argued that Incan society was socialistic. He claimed that the ayllu

system is what classified the Inca as a system of state socialism. Baudin defines state socialism as being based on the idea of the regulative action of a central power in social relations. According to Baudin, the idea of private property in Europe had been in existence for centuries, but no such idea existed at the times of the Incas. He claims, that society in Peru rested on a foundation of collective ownership which, to a certain extent, facilitated its establishment, because the effacement of the individual within a group prepared him to allow himself to be absorbed. Baudin argued that the higher ranking Incas tried, and succeeded to an

extent, to force a degree of uniformity on the common Inca. The Inca were forced to dress similarly, eat the same food, practice the same religion, and speak the same language, Quechua. *The Lancet* Rowman & Littlefield This textbook provides a comprehensive and state-of-the-art overview of the major issues specific to the field of pediatric gastroenterology, hepatology, and nutrition. The first part of the book, *Gastroenterology and Nutrition*, presents in a systematic way the overall scope of issues encountered by children (newborn to teenagers)

suffering from disorders of the gastrointestinal tract, pancreas and/or presenting nutritional issues. These chapters are structured in logical sections to facilitate consultation and include major topics ranging from congenital disorders to gastrointestinal problems of the newborn, infectious diseases of the gastrointestinal tract, and approach to nutritional problems in the various pediatric ages. The second part of the book, Hepatology, is articulated in a series of chapters which present a comprehensive review

of congenital and acquired disorders of the biliary tract and liver. This section also includes a critical analysis of available diagnostic and therapeutic procedures and future perspectives. Written by experts in the field, *Textbook of Pediatric Gastroenterology, Hepatology and Nutrition: A Comprehensive Guide to Practice* constitutes a much needed, innovative resource combining updated, reliable and comprehensive information with agile consultation for a streamlined approach to the care of children with such disorders.
