How does nature work? When one looks closely at the enormously complex web of life, it is impossible not to be caught by the wonder of how all living things – including rocks and crystals – are interconnected. Just as there is thought behind action, so there is energy behind matter. The Fertile Earth, the third volume of the Eco-Technology series which presents the original, passionate and convincing research of Viktor Schaubberger in translation for the first time, contains his groundbreaking writings on trees, biodynamic agriculture and subtle energies in Nature. It provides answers to pressing questions, like why so many plant and animal species are disappearing. Schaubberger was a pioneering genius who combined keen observation of Nature with intuitive brilliance and a sharp engineer ' s brain. One of the first genuine environmentalists, he was predicting ecological catastrophe when no-one else could see it coming. In the era of global warming, deforestation and desertification, Schaubberger ' s predictions are now being proven right. His work is enjoying a worldwide revival because he was able to convey how an understanding of Nature ' s subtle energies is essential to our survival. The Eco-Technology series makes available for the first time Viktor Schaubberger ' s original writings and passionate debates. Callum Coats has painstakingly collected, translated and edited the material for what promises to be the most definitive study yet of this extraordinary man ' s life and work. Two Groundbreaking Scientists and Their Conflicting Visions of the Future of Our Planet 'Does the earth's finite carrying capacity mean economic growth has to stop? That momentous question is the subject of Charles Mann's brilliant book.' Wall Street Journal In forty years, the population of the Earth will reach ten billion. Can our world support so many people? What kind of world will it be? In this unique, original and important book, Charles C. Mann illuminates the four great challenges we face - food, water, energy, climate change - through an exploration of the crucial work and wide-ranging influence of two little-known twentieth-century scientists, Norman Borlaug and William Vogt. Vogt (the Prophet) was the intellectual forefather of the environmental movement, and believed that in our using more than the planet has to give, our prosperity will bring us to ruin. Borlaug's research in the 1950s led to the development of modern high-yield crops that have saved millions from starvation. The Wizard of Mann's title, he believed that science will continue to rise to the challenges we face. Mann tells the stories of these scientists and their crucial influence on today's debates as his story ranges from Mexico to India, across continents and oceans and from the past and the present to the future. Brilliantly original in concept, wryly observant and deeply researched, The Wizard and the Prophet is essential reading for readers of

The Energy Evolution, the final volume in the revolutionary Eco-Technology series, contains radical environmentalist Viktor Schaubberger ' s groundbreaking writings on methods for energy generation that harness the enormous potential of Nature. Nature produces energy by slow, cool, implosive means – by a centripetal inward motion, while our present culture uses explosive centrifugal (outwards) movement, which is wasteful and many times less powerful and effective. It also uses up the Earth ' s resources and pollutes her ecosystems. This volume describes different kinds of energy machines which depend on the principle of implosion: A spring water-producing machine A tornado home energy generator A Klimator which produces mountain-quality air The biotechnical submarine A technique for producing power from ocean deeps A flying saucer prototype which rose at fantastic speed to high altitudes A perpetual motion suction-based implosion machine One of the first genuine environmentalists, Schaubberger was a pioneering genius who combined keen observation of Nature with intuitive brilliance and a sharp engineer ' s brain. His work is enjoying a worldwide revival because he was able to convey how an understanding of Nature ' s subtle energies is essential to our survival. This Fertile Earth contains his innovative theories as well as his very last letters on the subject, providing an alternative analysis of the unharnessed and vital power of Nature. The Eco-Technology series makes available for the first time Viktor Schaubberger ' s original writings and passionate debates. Callum Coats has painstakingly collected, translated and edited the material for what promises to be the most definitive study yet of this extraordinary man ' s life and work. "Told with brains and heart" —Michelle Gable, New York Times bestselling author of A Paris Apartment "Bristles with charm and curiosity" —Winston Groom, New York Times bestselling author of Forrest Gump "A wholly original and superbly crafted work of art, Beasts of Extraordinary Circumstance is a masterpiece of the imagination." —Lori Nelson Spielman, New York Times bestselling author of The Life List and Sweet Forgiveness "Charlotte's Web for grown-ups who, like Weylyn Grey, have their own stories of being different, feared, brave, and loved." —Mo Daviau, author of Every Anxious Wave Ruth Emmie Lang teaches us how to find magic in the ordinary in her magical realism debut Beasts of Extraordinary Circumstance. Orphaned, raised by wolves, and the proud owner of a horned pig named Merlin, Weylyn Grey knew he wasn't like other people. But when he single-handedly stopped that tornado on a stormy Christmas day in Oklahoma, he realized just how different he actually was. As amazing as these powers may appear, they tend to manifest themselves at inopportune times and places, jeopardizing not only his own life, but the life of Mary, the woman he loves. Beasts of Extraordinary Circumstance tells the story of Weylyn Grey's life from the perspectives of the people who knew him, loved him, and even a few who thought he was just plain weird. Although he doesn't stay in any of their lives for long, he leaves each of them with a story to tell: great storms that evaporate into thin air; fireflies that make phosphorescent honey; a house filled with spider webs and the strange man who inhabits it. There is one story, however, that Weylyn wishes he could change: his own. But first he has to muster enough courage to knock on Mary's front door.

The sequel to The Warrior Heir by New York Times and USA Today bestselling author Cinda Williams Chima. Sixteen-year-old Seph McCauley has spent the past three years getting kicked out of one exclusive private school after another. And it's not his attitude that's the problem: it's the trail of magical accidents—lately, disasters—that follow in his wake. Seph is a wizard, orphaned and untrained, and his powers are escalating out of control. After causing a tragic fire at an after-hours party, Seph is sent to the Havens, a secluded boys' school on the coast of Maine. At first, it seems like the answer to his prayers. Gregory Leicester, the headmaster, promises to train Seph in magic and initiate him into his mysterious order of wizards. But Seph's enthusiasm dampens when he learns that training comes at a steep cost, and that Leicester plans to use his students' powers to serve his own wicked agenda. In this companion novel to The Warrior Heir, everyone's got a secret to keep: Jason Haley, a fellow student who's been warned to keep away from Seph; the enchanter Linda Downey, who knew his parents; the rogue wizard Leander Hastings; and the warriors Jack Swift and Ellen Stephenson. The only question is: Does Seph have the strength to survive this wizard war?

The Frozen Rabbi Gill & Macmillan

From the best-selling, award-winning author of 1491 and 1493--an incisive portrait of the two little-known twentieth-century scientists, Norman Borlaug and William Vogt, whose diametrically opposed views shaped our ideas about the environment, laying the groundwork for how people in the twenty-first century will choose to live in tomorrow's world. In forty years, Earth's population will reach ten billion. Can our world support that? What kind of world will it be? Those answering these questions generally fall into two deeply divided groups--Wizards and Prophets, as Charles Mann calls them in this balanced, authoritative, nonpolemical new book. The Prophets, he explains, follow William Vogt, a founding environmentalist who believed that in using more than our planet has to give, our prosperity will lead us to ruin. Cut back! was his mantra. Otherwise everyone will lose! The Wizards are the heirs of Norman Borlaug, whose research, in effect, wrangled the world in service to our species to produce modern high-yield crops that then saved millions from starvation. Innovate! was Borlaug's cry. Only in that way can everyone win! Mann delves into these diverging viewpoints to assess the four great challenges humanity faces--food, water, energy, climate change--grounding each in historical context and weighing the options for the future. With our civilization on the line, the author's insightful analysis is an essential addition to the urgent conversation about how our children will fare on an increasingly crowded Earth.
