Fainting Goats as Pets. Fainting Goat Or Myotonic Goats Owners Manual Atlantic Publishing Company

Excerpt from The Milch Goat in California There are many different breeds of milch goats, but comparatively few of these are represented in California; those present in large numbers being the Toggenburg, Saanen, and anglo-nubian. A great variety of crosses and numerous goats of no particular breeding are also found. Toggenburg. - This breed is at the present time the most numerous in this state. It has its native home in the Toggenburg Valley, Switzerland, where it has been bred for centuries. The prevailing color is brown, both light and dark, with white markings. A white bridle mark is always present on each side of the face. White is also present on the underline and on the legs below the knees and hocks. White is also now and then found on the sides of the animal. As a rule, they are hornless, but horns are sometimes developed. The head is rather long, facial lines straight or slightly concave, ears of a medium size, more or less erect, although sometimes held almost horizontally; The neck is

somewhat long and slender and there may or may not be wattles at the base of the lower jaw.

Toggenburgs usually have a beard, which on the male is long and heavy. The better specimens of the breed are always lean and of medium size, females weighing about 100 to 140 pounds, while bucks as a rule weigh from 110 to 140 pounds. Both long-haired and short-haired animals are often seen in the same herd. It has been our experience that the Toggenburgs are very hardy and make splendid mothers. Saanen. - This is another Swiss breed which is quite similar to the Toggenburg in general conformation. They are a little heavier in weight, mature bucks weighing from 175 to 200 pounds and does from 110 to 140 pounds. They are of a white or cream color, and usually short-haired. The Saanen is considered a hornless breed, but horns often occur as in the case of the Toggenburg. The Saanen may be used to great advantage in grading up herds in this state, as many of the common goats are white in color. CSIRO PUBLISHING

Goats are a diverse range of beautiful (and sometimes rare) animals. Billy or nanny goats are the source of many a children's story. Goats were taken into the human fold over 10,000 years ago. From some of these animals, we obtain the fiber to create exquisite mohair and cashmere clothing. Others provide (extremely healthy) meat

and milk; the latter being frequently turned into mouth-watering cheeses. Wandering the fields, hillsides, and mountains, goats are browsers and prefer unwanted brush, briar, and weeds, their lips and tongues choosing only the tastiest plants. Extremely intelligent and curious, they are also experts at escaping from 'secure' fields. And, they can make excellent pets. Along with photographs, this book offers information on some 37 breeds of goats from all around the world, including size and weight, hair type, and history. (Series: Know Your...)
