Prenatal Development and Parents' Lived Experiences: How Early Events Shape Our Psychophysiology and Relationships (Norton Series on Interpersonal Neurobiology) Addison-Wesley Professional

Who is the juggling mother, the woman who quietly flicks dried cereal off her blazer while running a corporate empire? The Juggling Mother explores the figure of contemporary mothering in media representations: a typically white, middle-class woman on the verge of coming undone because of her unwieldy slate of labours. More troublingly, she also serves as a model neoliberal worker who upholds white privilege and notions of mastery, capacity, and productivity. Amanda Watson makes the controversial case that mothers with the most power are complicit in the exclusion of less privileged ones – and in their own undoing.

What It Was All About NYU Press

Despite the fact that, statistically, women of low socioeconomic status (SES) experience greater difficulty conceiving children, infertility is generally understood to be a wealthy, white woman's issue. In *Misconception*, Ann V. Bell overturns such historically ingrained notions of infertility by examining the experiences of poor women and women of color. These women, so the stereotype would have it, are simply too fertile. The fertility of affluent and of poor women is perceived differently, and these perceptions have political and social consequences, as social

policies have entrenched these ideas throughout U.S. history. Through fifty-eight in-depth interviews with women of both high and low SES, Bell begins to break down the stereotypes of infertility and show how such depictions consequently shape women's infertility experiences. Prior studies have relied solely on participants recruited from medical clinics—a sampling process that inherently skews the participant base toward wealthier white women with health insurance. In comparing class experiences, *Misconception* goes beyond examining medical experiences of infertility to expose the often overlooked economic and classist underpinnings of reproduction, family, motherhood, and health in contemporary America. A WOMAN'S BATTLE WITH THE BILLION-DOLLAR BABY BUSINESS Cracked Open is Miriam Zoll's eye-opening account of growing into womanhood with the simultaneous opportunities offered by the U.S. women's movement and new discoveries in reproductive technologies. Influenced by the pervasive media and cultural messages suggesting that science had finally eclipsed Mother Nature, Zoll postponed motherhood until the age of 40. When things don't progress as she had hoped, she enters a world of medical seduction and bioethical quagmires. Desperate to conceive, she surrenders to unproven treatments and procedures only to learn that the odds of becoming a mother through reproductive technologies are far less than she and her generation had been led to believe. A provocative examination of how unequal access to reproductive technology replays the sins of the eugenics movement Eugenics, the effort to improve the human species by inhibiting reproduction of "inferior" genetic strains, ultimately came to be regarded as the great shame of the Progressive movement. Judith Daar, a prominent expert on the intersection of law and medicine, argues that current attitudes toward the potential users of modern assisted reproductive technologies threaten to replicate eugenics' same discriminatory practices. In this book, Daar asserts how barriers that block certain people's access to reproductive technologies are often founded on biases rooted in notions of class, race, and marital status. As a result, poor, minority, unmarried, disabled, and LGBT individuals are denied technologies available to well-off nonminority heterosexual applicants. An original argument on a highly emotional and important issue, this work offers a surprising departure from more familiar arguments on the issue as it warns physicians, government agencies, and the general public against repeating the mistakes of the past. Transhumanisms and Biotechnologies in Consumer Society offers new, critical perspectives on the impact of 'life-enhancing' technological advancements on consumer identity positions and market evolutions. Technoproggressive innovations that include body modification technologies and reproductive technologies have enabled people to transcend bodily constraints. In parallel, they provoke necessary, critical interrogation around human capabilities, technological possibilities, gender equality, feminism, personal identity, bioethics, markets and morality. The contributions in this book re-evaluate these topics and elucidate some of the vexed relationships between consumers of biotechnologies and markets they consider restrictive or misleading. Secondly, by illustrating consumers' questioning of and resistance to biomedical, market imperatives, they highlight how the notion of consumer sovereignty, consumer influence over markets, has now advanced into novel forms of consumer activism made manifest through contemporary health justice movements. The chapters in this book also uncover profoundly personal consumer accounts on coping with and managing bodies-in-transition, focusing on illness, self-perception, survivorship and the vicissitudes of these corporeal experiences. This book will allow readers to understand how accelerated technological market changes are being experienced and creatively countered at the societal and individual level. The chapters in this book were originally published as a special issue of Journal of Marketing Management.

In Policing the Womb, Michele Goodwin explores how states abuse laws and infringe on rights to police women and their pregnancies. This book looks at the impact of these often arbitrary laws which can result in the punishment, incarceration, and humiliation of women, particularly poor

women and women of color. Frequently based on unscientific claims of endangering a fetus, these laws allow extraordinary powers to state authorities over reproductive freedom and pregnancies. In this book, Michele Goodwin discusses real examples of women whose pregnancies have been controlled by the law and what has led to the United States being the deadliest country in the developed world for a woman to be pregnant.

Broken Voices is the first English-language book on Korea's rich folksong heritage, and the first major study of the effects of Japanese colonialism on the intangible heritage of its former colony. Folksongs and other music traditions continue to be prominent in South Korea, which today is better known for its technological prowess and the Korean Wave of popular entertainment. In 2009, many Koreans reacted with dismay when China officially recognized the folksong Arirang, commonly regarded as the national folksong in North and South Korea, as part of its national intangible cultural heritage. They were vindicated when versions from both sides of the DMZ were included in UNESCO's Representative List of the Intangible Cultural Heritage of Humanity a few years later. At least on a national level, folksongs thus carry significant political importance. But what are these Korean folksongs about, and who has passed them on over the years, and how? Broken Voices describes how the major repertoires were transmitted and performed in and around Seoul. It sheds light on the training and performance of professional entertainment groups and singers, including kisaeng, the entertainment girls often described as Korean geisha. Personal stories of noted singers describe how the colonial period, the media, the Korean War, and personal networks have affected work opportunities and the standardization of genres. As the object of resentment (and competition) and a source of creative inspiration, the image of Japan has long affected the way in which Koreans interpret their own culture. Roald Maliangkay

describes how an elaborate system of heritage management was first established in modern Korea and for what purposes. His analysis uncovers that folksong traditions have changed significantly since their official designation; one major change being gender representation and its effect on sound and performance. Ultimately, Broken Voices raises an important issue of cultural preservation—traditions that fail to attract practitioners and audiences are unsustainable, so compromises may be unwelcome, but imperative. Speaking from and to the growing movement among academics to become involved with 'socially-engaged' work, this volume presents first-person case studies of attempts to fix serious ethical problems in medical practice and research. It highlights the critical difference between the pundit approach to bioethics and the interventional approach - the talkers and the doers - and points to how abused and damaged the doers often end up. Chapters cover a diverse set of topics, including the troubling influence of for-profit businesses on public health policy, the politics of exposing histories of unjust medical research, the challenges of patient rights' work in sexuality and reproduction, collaborations between NGOs and academics, methods for changing entrenched yet harmful medical practices, engaging public policy through educating governmental leaders, and whistleblowing. The trending interest in the interplay of academia and advocacy and the growing importance of 'socially-engaged' work by academics make this a timely and much-needed resource.

A candid assessment of the pros and cons of delayed motherhood. Biology does not bend to feminist ideals and science does not work miracles. That is the message of this eye-opening discussion of the consequences of delayed motherhood. Part personal account, part manifesto, Selvaratnam recounts her emotional journey through multiple miscarriages after the age of 37. Her doctor told her she still "had time," but Selvaratnam found little reliable and often conflicting information about a mature woman's biological ability (or inability) to conceive. Beyond her personal story, the author speaks to women in similar situations around the country, as well as fertility doctors, adoption counselors, reproductive health professionals, celebrities, feminists, journalists, and sociologists. Through in-depth reporting and her own experience, Selvaratnam urges more widespread education and open discussion about delayed motherhood in the hope that long-lasting solutions can take effect. The result is a book full of valuable information that will enable women to make smarter choices about their reproductive futures and to strike a more realistic balance between science, society and personal goals.

How does one make decisions today about in vitro fertilization, abortion, egg freezing, surrogacy, and other matters of reproduction? This book provides the intellectual and emotional intelligence to help individuals make informed choices amid misinformation and competing claims. Scott Gilbert and Clara Pinto-Correia speak to the couple trying to become pregnant, the woman contemplating an abortion, and the student searching for sound information about human sex and reproduction. Their book is an enlightening read for men as well as for women, describing in clear terms how babies come into existence through both natural and assisted reproductive pathways. They update "the talk" for the twenty-first century: the birds, the bees, and the Petri dishes. Fear, Wonder, and Science in the New Age of Reproductive Biotechnology first covers the most recent and well-grounded scientific conclusions about fertilization and early human embryology. It then discusses the reasons why some of the major forms of assisted reproductive technologies were invented, how they are used, and what they can and cannot accomplish. Most important, the authors

explore the emotional side of using these technologies, focusing on those who have emptied their emotions and bank accounts in a valiant effort to conceive a child. This work of science and human biology is informed by a moral concern for our common humanity.

This edited collection examines conflicting assumptions, expectations, and perceptions of maternity in artistic, cultural, and institutional contexts. Over the past two decades, the maternal body has gained currency in popular culture and the contemporary art world, with many books and exhibitions foregrounding artists' experiences and art historical explorations of maternity that previously were marginalized or dismissed. In too many instances, however, the maternal potential of female bodies—whether realized or not—still causes them to be stigmatized, censored, or otherwise treated as inappropriate: cultural expectations of maternity create one set of prejudices against women whose bodies or experiences do align with those same expectations, and another set of prejudices against those whose do not. Support for mothers in the paid workforce remains woefully inadequate, yet in many cultural contexts, social norms continue to ask what is "wrong" with women who do not have children. In these essays and conversations, artists and writers discuss how maternal expectations shape both creative work and designed environments, and highlight alternative ways of existing in relation to those expectations.

The year is 1970: The Supreme Court has legalized abortion, Equal Pay for Equal Work is now the law, and Affirmative Action programs attempt to redress past injustices and inequities. Women are coming together

nationwide in consciousness-raising groups, sharing their knowledge and experiences with each other. A group of six women in Stentoria, California bond through such a group, and support each other as women in this new Movement are forming collectives; publishing their own books and periodicals; creating an exciting new genre of Womens Music; as well as starting their own bookstores, to make these new materials readily available to the community. New spiritual movements focused on the Divine Feminine principle are also beginning. Even some men are sympathetic and supportive of these ideals. But as the 1980s arrive, the situation changes: the backlash against the womens movement in politics and the media seemingly turns into a full-fledged war, specifically targeting the gains that women have achieved.

Opposition from traditional religions hardens, and womens reproductive rights come under renewed attack; the Equal Rights Amendment fails, even as women themselves debate controversial questions: such as banning pornography, and how to view a rising Third Wave of the womens movement. Ominously, the threat of AIDS seemingly brings the era of sexual freedom to a close. The six women deal with all these issues, as well as personal challenges including balancing work and family responsibilities. As the new century begins, they reflect about what the womens movement ultimately accomplished. In a world now characterized by growing economic inequality, increasing low self-esteem for some women (exemplified by cosmetic surgery and extreme makeovers), legalized same-sex marriage, and media attention to Transgender issues, this book may help you to appreciate not only how far we've come, but how far we have yet to go.

The Present Age challenges readers to reexamine the role of the United States in the world since World War I. Nisbet criticizes Americans for isolationism at home, discusses the gutting of educational standards, the decay of education, the presence of government in all facets of life, the diminished connection to community, and the prominence of economic arrangements driving everyday life in America. This work is deeply indebted to the analyses of Tocqueville and Bryce regarding the threats that bureaucracy, centralization, and creeping conformity

pose to liberty and individual independence in the western world. The Present Age relates a tragedy--the unprecedented militarization of American life in the decades after 1914, as the result of the necessary resistance to National Socialist and Communist totalitarianism that fed into and reinforced the profound tendencies toward centralization within modern society. Robert Nisbet (1913-1996), former professor of sociology at Columbia University, is the author of Sociology as an Art Form; The Social Philosophers; Prejudices: A Philosophical Dictionary; The Sociological Tradition; History of the Idea of Progress; and Twilight of Authority, also published by Liberty Fund.
