A notary is a public official responsible for independently verifying signatures and oaths. Depending on how a document is written, a notarization serves to affirm the identity of a signer and the fact that they personally executed their signature. A notarization, or notarial act, officially documents the identity of a party to a document or transaction and the occasion of the signing that others can rely upon, usually at face value. A notary's authentication is intended to be reliable, to avoid the inconvenience of having to locate a signer to have them personally verify their signature, as well as to document the execution of a document perhaps long after the lifetime of the signer and the notary. An oath is a sworn statement. In most cases a person will swear that a written statement, oral statement, or testimony they are about to give is true. A notary can document that the notary administered an oath to an individual.

Historically, Notaries Public predate the Roman empire; their development coincides with that of written and recorded communication. As the ability to read and write was rare, the earliest Notaries Public served primarily as scribes to assist the illiterate. The decline of the Roman empire saw a corresponding reduction in the volume and importance of written communication. It wasn't until the dawning of the Renaissance that Notaries Public were once again called upon to perform important societal functions. Over the centuries, many a great author, poet and historian supplemented their incomes with fees collected from the provision of literacy services. American pioneer history is replete with examples of notarial assistance. Among them: the processing of land or mining claims, the authentication of public or private documents, and the reading and writing of general correspondence.

What is the relationship between common-sense, or 'folk', psychology and contemporary scientific psychology? Are they in conflict with one another? Or do they perform quite different, though perhaps complementary, roles? George Botterill and Peter Carruthers discuss these questions, defending a robust form of realism about the commitments of folk psychology and about the prospects for integrating those commitments into natural science. Their focus throughout the book is on the ways in which cognitive science presents a challenge to our common-sense self-image - arguing that our native conception of the mind will be enriched, but not overturned, by science. The Philosophy of Psychology is designed as a textbook for upper-level undergraduate and beginning graduate students in philosophy and cognitive science, but as a text that not only surveys but advances the debates on the topics discussed, it will also be of interest to researchers working in these areas.
